

OVERVIEW

Anti-SARS-CoV-2 Rapid Test Kit

Anti-SARS-CoV-2 Rapid Test is a rapid, one-step lateral flow assay intended for the qualitative detection and differentiation of IgM and IgG antibodies to the SARS-CoV-2 virus in patients suspected of a COVID-19 infection.

MOQ: 100 Kits (5000 Units)

Price: Call For Price

SPECIFICATIONS

A rapid lateral flow immunoassay intended for the qualitative detection and differentiation of IgM (early marker) and IgG (late marker) antibodies against the SARS-CoV-2 virus in plasma or serum.

IgM antibodies are generated initially by the body as a result of infection at about the time symptoms appear. IgM will dissipate within approximately one month. IgG antibodies are generated by the body about one week after symptoms appear and last for an extended amount of time.

This simple-to-use test requires no equipment or special expertise or training to implement.

- **Rapid Results – 15 minutes for a readout**
- **No special equipment or facilities needed**
- **Clear, easy-to-interpret results**
- **Built-in controls**
- **Room temperature storage**

Sensitivity at \geq 15 days after onset of symptoms

IgM – 95.7%

IgG – 99.0%

Specificity

IgM – 99%

IgG – 99%

CERTIFICATIONS

Emergency Use Authorization Approved 4/24/2020
